

Academic Year: 2025-26

Semester: V
Student id : 23104227
Name : Siddhi Tangsali

Class / Branch: TEIT

Subject: DevOps Lab

Name of Instructor: Prof. Sujata Oak

Experiment No. 7

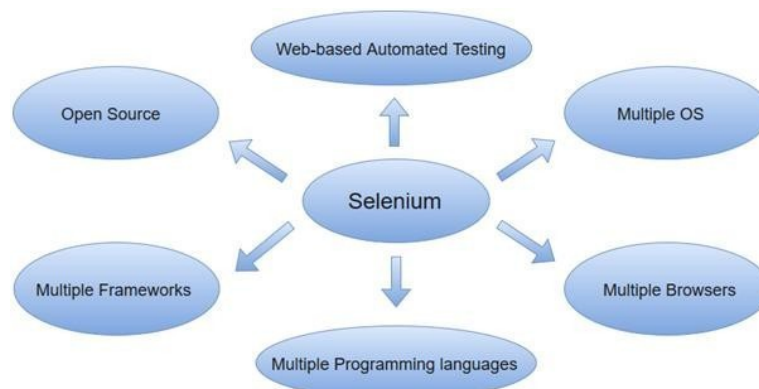

Aim: To implement selenium automation.

Theory:

Selenium is one of the most widely used open source Web UI (User Interface) automation testing suite. It was originally developed by Jason Huggins in 2004 as an internal tool at Thought Works. Selenium supports automation across different browsers, platforms and programming languages.

Selenium can be easily deployed on platforms such as Windows, Linux, Solaris and Macintosh. Moreover, it supports OS (Operating System) for mobile applications like iOS, windows mobile and android.

Selenium supports a variety of programming languages through the use of drivers specific to each language. Languages supported by Selenium include C#, Java, Perl, PHP, Python and Ruby. Currently, Selenium Web driver is most popular with Java and C#. Selenium test scripts can be coded in any of the supported programming languages and can be run directly in most modern web browsers. Browsers supported by Selenium include Internet Explorer, Mozilla Firefox, Google Chrome and Safari.

Selenium can be used to automate functional tests and can be integrated with automation test tools such as **Maven, Jenkins, & Docker** to achieve continuous testing. It can also be integrated with tools such as **TestNG, & JUnit** for managing test cases and generating reports.

Automation Testing

Automation testing uses the specialized tools to automate the execution of manually designed test cases without any human intervention. Automation testing tools can access the test data, controls the execution of tests and compares the actual result against the expected result. Consequently, generating detailed test reports of the system under test.

Steps for Selenium Automation in DevOps on Ubuntu

STEP 1: Selenium IDE-Installation

Selenium IDE is available only as Firefox and Chrome plug-in.

- o Launch Mozilla Firefox browser.
- o Open URL <https://addons.mozilla.org/en-us/firefox/addon/selenium-ide/> It will redirect you to the official add-on page of Firefox.
- o Click on "Add to Firefox" button.

Selenium IDE
by Selenium

Selenium IDE is an integrated development environment for Selenium tests. It is implemented as a Firefox extension, and allows you to record, edit, and debug tests.

★ 4.3 (412 reviews) 37,073 Users

Screenshots

- o A pop-up dialog box will be appeared asking you to add Selenium IDE as extension to your Firefox browser.
- o Click on "Add" button.

Add Selenium IDE

Required permissions:

- Access your data for all websites
- Download files and read and modify the browser's download history
- Access browser tabs
- Access browser activity during navigation

Optional settings:

☐ Allow extension to run in private windows

STEP2: Create a basic test case in Selenium ide.

The entire test script creation process in Selenium IDE can be classified into three steps:

1. Recording (recording user interactions with the browser)
 2. Playing back (executing the recorded script)
 3. Saving the test suite
- o Rename the project as "selenium_demo".
 - o Rename the test case as "javaTpoint_test".

Log 🔇 Reference

- o Click on the "Start Recording" Button present on the top right corner on the IDE to start recording the test case.

- o Go to your Firefox browser and open URL:www.google.com

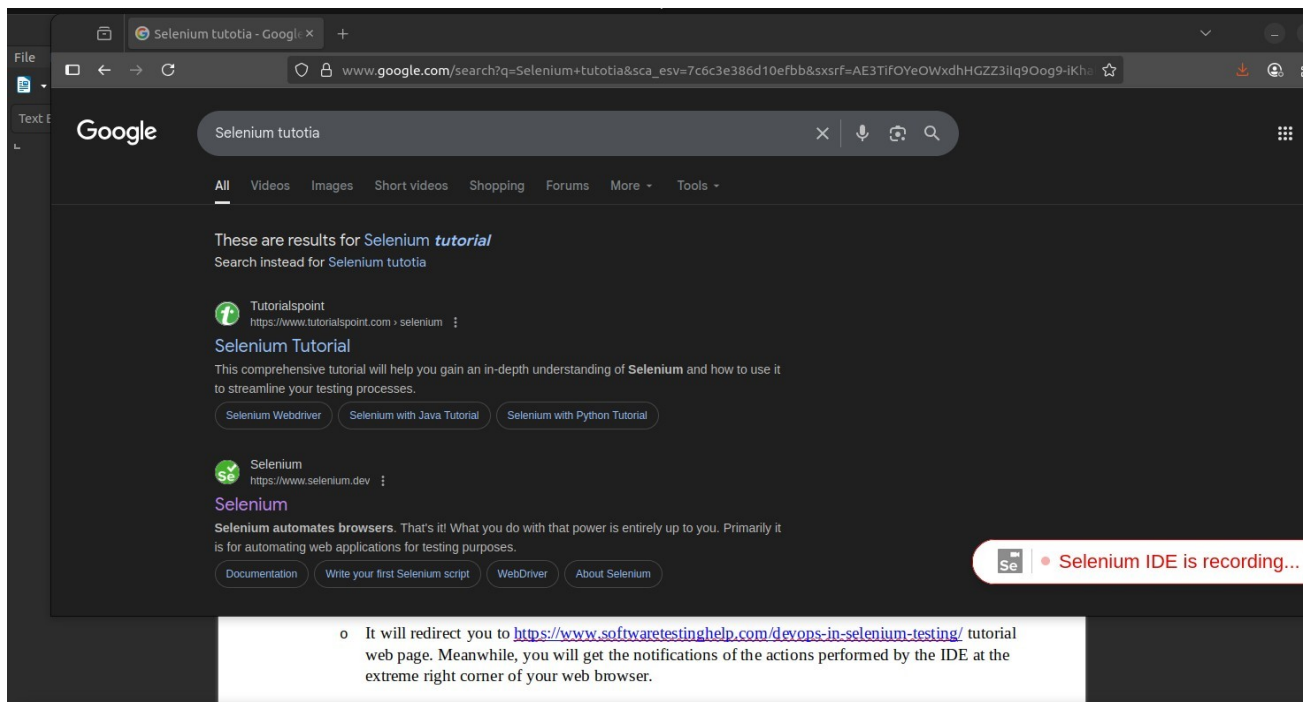

o

- o It will redirect you to the Google search engine page.

- o Type "Selenium DevOps Tutorials" in the Google search box.
- o Hit enter to get the search results.
- o Click on the link "How to Use DevOps in Selenium Testing" provided under the URL <https://www.softwaretestinghelp.com/devops-in-selenium-testing/>
- o It will redirect you to <https://www.softwaretestinghelp.com/devops-in-selenium-testing/> tutorial web page. Meanwhile, you will get the notifications of the actions performed by the IDE at the extreme right corner of your web browser.

- o o The Test Editor box now contains the list of all of your interactions with the browser.

Extension: (Selenium IDE) - Selenium IDE - selenium_demo* — Mozilla Firefox

Project: selenium_demo*

Description

Log Reference

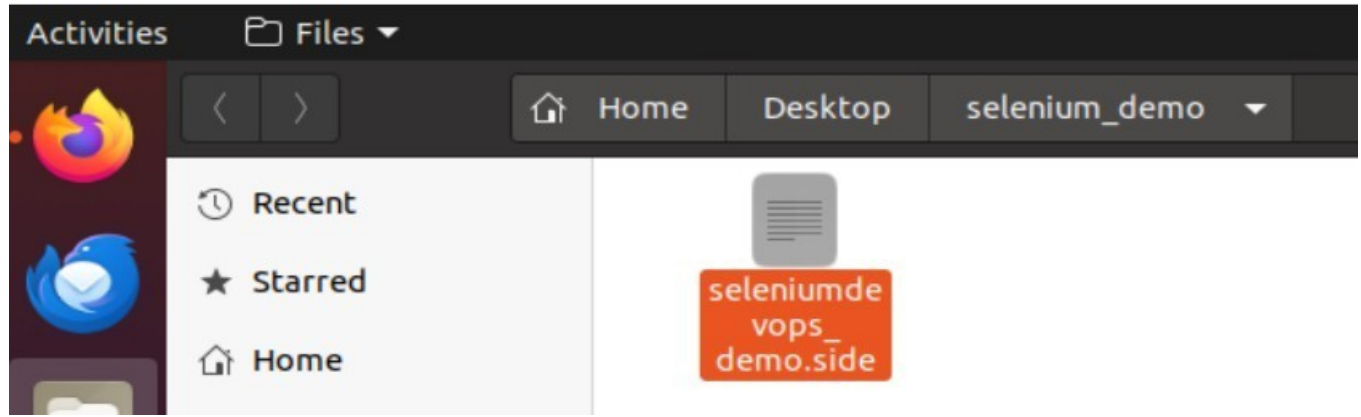

Running 'seldevops_test'

1. open on /?zx=1758691130427&no_sw_cr=1 OK
2. setWindowSize on 1531x743 OK
3. click on id=APJFqb OK
4. type on id=APJFqb with value Selenium tutotia OK

'seldevops_test' completed successfully

Saving the test suite

- o Click on the save button present on the extreme right corner of the menu bar.
- o Save the entire test suite as "SelDevOpsdemo.side" Test.
- o The test suite can be found at the location provided in the above steps. Notice that the test script is saved in .side format.

Conclusion: This experiment demonstrated how to automate a test case in Selenium ide.
